21. (currently amended) An information recording medium that is readable by an information processing system and having stored therein data, said data comprising:

a plurality of node keys, the plurality of node keys being associated with a plurality of nodes whereby a given one of the plurality of node keys is associated with a particular one of the plurality of nodes, the plurality of nodes being arranged according to a hierarchical tree structure having a root node and a plurality of leaves, the plurality of leaves being associated with a plurality of leaf keys and with a plurality of devices whereby a given one of the plurality of leaves is associated with a specific one of the plurality of leaf keys and with a particular one of the plurality of devices;

an enabling key block (EKB) which is encrypted using one or more keys selected from the group consisting of the plurality of node keys and the plurality of leaf keys;

first message data that includes data in which first content is encrypted with a first content key, data in which the first content key is encrypted by a content key encryption key, and a link to a location on said information recording medium wherein data is stored in which the content key encryption key is encrypted by the enabling key block (EKB) so that when the information processing system processes the first content, the information processing system decrypts the EKB using one or more keys selected from the group consisting of the plurality of node keys and the plurality of leaf keys, decrypts the data in which the content key encryption key is encrypted using the EKB,

decrypts the data in which the first content key is encrypted using the content key encryption key, and decrypts the data in which the first content is encrypted using the first content key; and

second message data that includes data in which second content is encrypted by a second content key, data in which the second content key is encrypted by the content key encryption key, and another link to the location on said information recording medium wherein the data is stored in which the content key encryption key is encrypted by the enabling key block (EKB) so that when the information processing system processes the second content, the information processing system decrypts the EKB using one or more keys selected from the group consisting of the plurality of node keys and the plurality of leaf keys, decrypts the data in which the content key encryption key is encrypted using the EKB, decrypts the data in which the second content key is encrypted using the content key encryption key, and decrypts the data in which the second content is encrypted using the second content key.
